

Are the two monitors identical in size, and if not, how do they differ?

M

The image shows a desk with two computer monitors on it. The monitors are different sizes, with one being larger than the other. The smaller monitor appears to be a MacBook Pro, while the larger monitor is a standard desktop computer monitor.

The two monitors in the image are not identical in size. One monitor is larger than the other, with the larger monitor being placed on top of the smaller one.

Yes, the two monitors are different in size. The larger monitor is positioned on the left side of the image, while the smaller monitor can be seen on top of it.

Yes, the two monitors are identical.
